Product Description

Natural 1.6% 10-HDA Organic Fresh Royal Jelly Pure Royal Jelly for health care

Royal Jelly is a thick, milky substance secreted by the pharyngeal glands on the 6th and 12th day after birth of a special young nurse. The Queen Bee is fed with royal jelly throughout her life, while worker bees are fed with ordinary pollen. It has been found that nutrition is the only difference between worker bees and queens. The queen bee is made, not born. Queen Bee is the mother of 250,000 bees, and has more than 2,000 eggs in amazing real estate in one day. The Queen's life span lasts five years, and the life expectancy of workers is quite short, averaging three months or less.

Product name	Royal jelly
Type	we have 1.4% 1.6% 1.8% 2.0% 10-HDA
color	light yellow

About Royal Jelly: How do you know the quality?

Good quality royal jelly must meet 3 requirements:

1. The color must be light yellow to yellow. the fresher the color, the lighter yellow it is. But long time transfer without freezing, that will make the color change a little .
2. The taste must be more spicy, stronger plain taste, after that you can feel a little sweet. If no so strong taste but more sweet or plain taste, that might not be of good quality or 100% pure Royal Jelly.
3. The 10-HDA must be at least 1.4%, if lower than this content, that's certainly not a good quality. 1.4% and 1.6% are more popular and natural in Chinese beekeeping farms now. We also have 1.8%, 2.2% and other types.
